

## Attack Trees for Pampered Pets Risks

These attack trees were designed to help map risks for the business Pampered Pets, for both digitalising the business and for maintaining the existing infrastructure. This was conducted as a type of brainstorming to help begin the teams more formal efforts to create a qualitative risk analysis. Simpson, Dellago and Woods (2024) consider attack trees to be an important part of risk analysis.

### Attack Tree for a Digitalised Shop.

### Attack Tree for the Current Business.
